FOR THE URGENT ATTENTION OF MR T DUNNON

Dear Sir,

Re: Great House Farm, Llandough

With regards to the above development, I have today received from Ideal Homes, a detailed site plan showing the proposed layout of the development, access roads, houses, etc.

I have studied the plan most carefully and I am of the opinion that little attempt has been made at the detailed design stage to take account of the known and significant archaeological resource of this site, which was fully demonstrated in the field evaluation of 1990.

Accordingly, I cannot confirm that the detailed plans, which were submitted to yourselves by Ideal Homes have paid regard to the results and findings of the archaeological investigations, i.e. in the report dated August 1990. Unfortunately, therefore, condition 18 has not been fulfilled and cannot be discharged by your Authority.

It is clear that should the development proceed unchecked, significant and rare Early Medieval archaeology, including human skeletal remains (please note the provisions of the Disused Burial Grounds (Amendment) Act 1981) will be needlessly or thoughtlessly destroyed.

Accordingly, I recommend that the developer should, as a matter of urgency, now seek professional archaeological advice in order to draw together an archaeological mitigation strategy, which will effectively protect the archaeological resource (either in situ or by record), ensure the fulfillment of planning condition 18 and enable the development to proceed. I will, of course, be pleased to comment on the mitigation strategy on your behalf in due course. If you require any clarification or further information, please do not hesitate to contact me.

Yours faithfully,

Charles Hill

For the attention of Mr T Dunnon

Dear Sir,

GREAT HOUSE FARM, LLANDOUGH

I have received a communication this morning informing me that development has commenced on this site. As I am not aware that Conditions 16 and 18 imposed by the Vale of Glamorgan Borough Council have been fulfilled by the developer, Ideal Homes, or that they have been satisfactorily discharged from these conditions by yourselves, I recommend that urgent consideration is given to this matter and that a Breach of Condition notice is issued immediately on this development to protect the known fragile archaeological resource. I am particularly concerned that Condition 18 has not been met by the developer; this condition requires the formulation of an archaeological mitigation strategy.

I enclose for your convenience a list of archaeological contractors who have worked in the region and I would be grateful if you would redirect this to the developer. On the planning side we are fully able to assist you to ensure the successful discharging of your conditions in order to enable the development whilst protecting the cultural heritage resource.- this being done on the understanding it is for this case only.

Yours faithfully,

C HILL
Principal Archaeological Officer (Curatorial)

ARCHAEOLOGICAL CONTRACTORS

Tel: (0792) 655208

Fax: (0792) 474469

This list contains the names and addresses of professional archaeological contractors who have worked in Glamorgan and Gwent, and who have produced two or more reports, on different developments, which have been accepted by the relevant LPA and may be available for this type of project.

Names of other archaeological contractors can be obtained from:-

The Institute of Field Archaeologists
The Minerals Engineering Building
University of Birmingham
P.O.Box 363
Birmingham
B15 2TT
Telephone 021 471 2788

The archaeological contractors on this list are not approved or validated by the Curatorial Section of the Glamorgan-Gwent Archaeological Trust. It is the responsibility of the body commissioning the report to satisfy themselves of the ability of the archaeological contractor to undertake the necessary work.

Dear Sir,

GREAT HOUSE FARM, LECKWITH ROAD, LLANDOUGH, PENARTH

Thank you for consulting us on this application. We are most grateful for this opportunity to comment.

We have checked the area of the proposed development against the County Sites and Monuments Record, which is held and curated by this Trust. From the information available to us we can now advise that the site has already been subject to an archaeological assessment, the results of which have demonstrated that significant archaeological material is known to exist on the site. Brief details of the known archaeological interest of this site are given below.

Archaeological Interest

An archaeological assessment, 'Land at Great House Farm, Llandough' (August 1990), in the form of a field evaluation, demonstrated conclusively that significant archaeological deposits exist within the proposed development area, though the potential varies over the site. Deposits of medieval and possibly earlier date have been confirmed, including a quantity of human bone. In general, the archaeological material of highest potential exists in a broad band in the central southern area of the site, adjacent to the Church of St Dochdwy.

Recommendation

Because of the fact that the proposed development area contains archaeological material of known significance, we would urge most strongly that the applicant should consider mitigatory measures to protect the known archaeological interests. This could include excavation in order to 'preserve by record' the archaeological potential. Such work should be carried out in advance of development in the areas of high archaeological sensitivity.

This recommendation is made following the guidance of the recently-issued Welsh Office Planning Policy Guidance note (PPG 16), 'Archaeology and Planning'.

F A O M R T DUNNON

Dear Sir

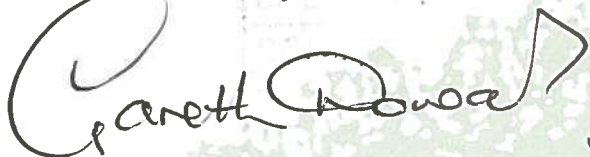

Re: Great House Farm, Llandough.

As discussed over the 'phone I enclose for your assistance a brief for the on-going work at the above site.

The provision of such a brief by your local authority to the developer is perfectly consistent with PPG16 (Wales), the provisions of the Town and Country Planning Act 1990, the Local Government, Planning and Land Act 1980, the New Towns Act 1981 and the Housing Act 1988. The brief is also fully in accordance with the Code of Conduct and the Code of Approved Practice for the Regulation of Contractual Arrangements in Field Archaeology, issued by the Institute of Field Archaeology, to which all professional and competent archaeological contractors abide.

If you require any further assistance please do not hesitate to ask.

Yours faithfully

Gareth Dowdell

GREAT HOUSE FARM, LLANDOUGH, SOUTH GLAMORGAN
BRIEF FOR ARCHAEOLOGICAL EXCAVATION

1.0 INTRODUCTION

1.1 It is the intention of Ideal Homes Ltd to develop Great House Farm, Llandough for residential purposes. In order to protect and preserve the known and significant archaeological remains including Early Medieval burials, The Glamorgan-Gwent Archaeological Trust recommended that an archaeological mitigation strategy should be devised. This however proved impossible and consequently the need to preserve the archaeological remains "by record" has become a requirement.

This brief has been prepared by the Curatorial Section of the Glamorgan-Gwent Archaeological Trust, the archaeological advisors to Vale of Glamorgan Borough Council, to ensure that a suitable programme of archaeological investigation is devised to ensure full archaeological excavation, post-excavation analysis and publication.

2.0 ARCHAEOLOGICAL INTEREST

The archaeological importance of the site was outlined in an archaeological evaluation (GGAT 1990) and has been further highlighted in excavation work by Cotswold Archaeological Trust.

3.0 PRESENT USE OF SITE AND AREA OF DETAILED ARCHAEOLOGICAL WORK

The site has been cleared of structures and there are no known restraints to excavation. The archaeological work will entail the excavation of the entire extent of the burial ground and other related features, within the proposed development area.

4.0 EXECUTION OF WORKS

3.1 The Vale of Glamorgan Borough Council will require that all archaeological work, as is required to preserve the archaeology 'by record', will be executed in a proper and professional manner as defined by the Institute of Field Archaeologists Code of Conduct and the Code of Approved Practice for the Regulation in Field Archaeology, also English Heritage's 'Management of Archaeology Projects' (hereafter MAP2) document.

5.0 THE PROJECT DESIGN

5.1 The archaeological contractor should undertake all the necessary archaeological work in a logical and phased manner. The archaeological contractor must prepare a Project Design on the lines given in MAP2, which should be submitted to LPA for agreement prior to the commencement of the work.

5.2 The Project Design Brief should consist of an Excavation Research Design (Stage 1), a Post-Excavation Assessment Design (Stage 2) and a Post-Excavation Research Design (Stage 3). The archaeological contractor should prepare the first two of these documents in detail prior to any award of contract and the latter immediately on the completion of the excavation. The Project Design will be accompanied by detailed cost estimates for the excavation stages and outline costs for the post-excavation assessment and research designs. Detailed costs for stages 2 and 3 will be provided immediately on the completion of the preceding excavation stage.

6.0 METHODOLOGY

6.1 The archaeological contractor will be required to devise an excavation strategy to examine and record the evidence for all human and human derived activity on the site in such a way to give a maximum information return of the cultural heritage resources that are present and will be destroyed by the development. All archaeological material unaffected by the development must remain intact and protected.

6.2 As part of the excavation strategy the archaeological contractor will be expected to devise an appropriate sampling strategy that will allow sufficient information to be extracted about the site, its functions, character and date. This will apply to the recovery of artefactual, ecofactual and environmental data and, if necessary, to the selection of features for full or partial excavation and recording.

6.3 The archaeological contractor will be expected to excavate fully and record in detail all the significant archaeological deposits. The excavation areas may initially be excavated by machine (using a toothless blade) to just above the archaeological horizon. All archaeological and structural remains will thereafter be excavated by hand to the natural deposits, which must be proven. All areas will be cleaned to an appropriate standard to prove the presence, or absence, of archaeological features and to determine their significance.

7.0 RECORDING

7.1 All archaeological contexts will be recorded using a continuous numbered context system on pro-forma recording sheets.

7.2 Written, drawn and photographic records (b&w and colour slides) of an appropriate level of detail will be maintained throughout the course of the project. Plans (other than excavation location plans) will be at a minimum scale of 1:20; section drawings will be at a minimum scale of 1:10; photographic records will be at a minimum 35mm format.

7.3 Drawn records will be related to Ordnance Survey datum and published boundaries where appropriate.

7.4 All artifacts recovered during the project will be retained and be related to the contexts from which they derived wherever possible. All typologically distinct and closely datable finds will be recorded three-dimensionally where possible.

7.5 Any human remains that are discovered must be excavated following the procedures outlined in IFA Technical Paper 13 "Excavation and Post-Excavation Treatment of Cremated and Inhumed Human Remains", and must comply with the relevant Home Office regulations.

7.6 All human burials must be accurately planned and/or recorded using photogrammetric techniques.

7.7 Any features containing deposits of environmental or technological significance will be sampled.

7.8 The requirements for the conservation of artifacts and samples will be unpredictable until after the completion of the fieldwork. The archaeological contractor will ensure, however, that at least minimum acceptable standards are achieved (the UK Institute of Conservation's "Guidelines for the Treatment of Finds from Archaeological Sites" should be used as guidance).

8.0. MONITORING

8.1 The archaeological advisors to the LPA (the Curatorial Section of the Glamorgan-Gwent Archaeological Trust) will monitor the work, and it is therefore recommended that the earliest possible notice be given, in writing, before each stage of the work commences.

8.2 The archaeological advisors to the LPA will be responsible for monitoring, to ensure compliance with the brief, until the deposition of the site archive and finds (see 7.9). To facilitate this, the Specification should include a projected timescale for the work.

8.3 No area will be back-filled until it has been inspected by the LPA's archaeological advisors, unless written permission is granted in advance.

9.0 REPORTING

9.1 The report should be fully representative of the archaeological information gained from the total excavation.

9.2 The report will contain at least one plan showing the Site Location in respect of the local topography, as well as the position of all excavated areas.

9.3 Where necessary, the report will also contain suitably selected plans and sections of significant archaeological features.

9.4 Pottery will be analysed to the standards outlined in 'Draft Guidelines for the Preparation of Pottery Archives' as prepared by the Study Group for Roman Pottery in consultation with the I.F.A. All other material will be analysed following the advice given the 'The Institute of Field Archaeologists': Guidelines for Finds Work'.

9.5 Provision should be made prior to the commencement of the project for the publication of relevant archaeological finds and costs outlined to carry out this work. Detailed costs should be submitted at Stage 3 of the Design Brief.

9.6 The completed project archive will be prepared in accordance with the guidelines outlined in Appendix 3 of 'Management of Archaeological Projects' (i.e. MAP2, after English Heritage, 1991).

9.7 An interim report of the work should be submitted to LPA within six weeks of the completion of the fieldwork.

9.8 A summary report of the work should be submitted for publication to a national journal (eg Archaeology in Wales) no later than one year after the completion of the work.

9.9 The full report of the work, for publication, to a national journal or other publishing body, should be submitted no later than twelve months after the completion of the fieldwork.

9.10 Arrangements should be made with an appropriate organisation, such as the National Museum of Wales or the Royal Commission on Ancient and Historical Monuments (Wales) for the deposition of the paper and finds the archives. No matter where the archive is finally deposited, a copy of the report should be provided for the Regional Sites and Monuments Record.

9.11 Although there may be a period during which client confidentiality should be maintained the report and the archive should be deposited in

the appropriate repository no later than twelve months after completion of the fieldwork.

10.0 SUITABLE ARCHAEOLOGICAL CONTRACTOR

10.1 The work will be undertaken by the staff of a competent and professional archaeological body (hereafter the archaeological contractor).

10.2 The archaeological contractor will have considerable experience of archaeological field evaluation, be preferably managed by a Member of the Institute of Field Archaeology, who is validated in the Area of Competence of Excavation, and also have a proven track record of archaeological excavation and publication.

10.3 The archaeological contractor will observe the Institute of Field Archaeologists' Code of Conduct and the Code of Approved Practice for the Regulation of Contractual Arrangements in Field Archaeology.

10.4 The personnel involved in the fieldwork should preferably be corporate members of the Institute of Field Archaeologists, and shall be identified to the LPA in advance, with, where requested, details of their qualifications and experience. Arrangements for the maintenance of professional standards should also be stated.

10.5 The body commissioning the report will satisfy themselves of the ability of the archaeological contractor to undertake the necessary work.

Note

Professional Indemnity Insurance

It is recommended that it is in the best interest of those commissioning archaeological work that they ensure potential contractors have professional indemnity insurance.

Dear Sir

Re: Great House Farm, Llandough.

I write to you in my capacity as regional archaeological curator and archaeological advisor to the Members of the Vale of Glamorgan Borough Council.

Further to my letter to you of 22nd April, which was sent as a matter of urgency and for which I have had no satisfactory response, I am now in possession of a press release issued by your Trust to the South Wales Echo. I am most concerned by what I have read and that you apparently intend to undertake further work on this important site, though no brief has been provided to you by the Local Planning Authority. I therefore must insist that no further work is undertaken by your Trust until such time as a brief has been provided and detailed specifications presented for the approval of the Local Planning Authority.

May I remind you that as the effective County Archaeologist for the County of South Glamorgan, as recognised by PPG16 (Wales) I must satisfy myself that your organisation is not in breach of the Institute of Field Archaeology's Code of Conduct or the Code of Approved Practice for the Regulation of Contractual Arrangements in Field Archaeology. I require an immediate response to this letter.

Yours faithfully

Charles Hill

Dear Sirs,

**Ideal Homes Development at:
Great House Farm, Llandough
Nos. 92/00671/RES and 89/01396/OUT**

I refer to your letter of 7th April, 1994, and amended plan No. 3024/VG/01A and note your comments relating to the request from the Llandough Community Council that a turning head be provided adjacent to the church.

I am now satisfied that Conditions 5, 9 and 15 of 89/013961/OUT have been met and that "reserved matters" relating to landscaping within Condition 1 of the same consent is now discharged within plan Nos. 3024/VG/01A and 3024/TP/100(L)A.

I would also like to draw to your attention to the maintenance requirement set out within Condition 9, and request that all shrub areas not part of the immediate curtilage of the dwellings be conveyed to the purchasers of the adjacent plots.

Yours faithfully,

Peter J. Taylor
Chief Planning and Development Officer

GLAMORGAN
GWENT
ARCHAEOLOGICAL
TRUST

Tel: (0792) 655208
Fax: (0792) 474469

Dear Sir,

GREAT HOUSE FARM, LLANDOUGH

With reference to the above development and further to our excellent meeting on 16 March 1994, I am now able to comment further on the proposals to protect the known archaeological resources of this significant site as demonstrated by the field evaluation of August 1990.

Firstly, I do not understand the comment made in the letter by Paul Vining of Wyn Thomas and Partners that your approval of the Project Design is 'not required under the conditions of the planning permission'. I would argue the contrary - that until the condition is properly discharged and the protection of the archaeological resource assured (in this case 'protection by record') then your Authority undoubtedly has the main responsibility for the protection of the archaeology of this sensitive site, which is enshrined in PPG 16, Section 14.

In general terms I welcome the initiatives of the Developer, who has secured archaeological advice and an archaeological contractor to carry out the necessary work on his behalf.

My initial reaction, however, must be that the Detailed Project Design is a response to an identified need for full archaeological excavation of part of the site in advance of development. The preference would have been to present a detailed archaeological mitigation strategy which could potentially have minimised the amount of expensive archaeological excavation required. This strategy could perhaps have protected the most sensitive archaeological deposits in situ, whilst at the same time enabling the permitted development to proceed.

Unfortunately the Developer has been unable to present such a mitigation strategy and therefore the second best option of archaeological excavation, post-excavation analysis and publication, which invariably are more costly, has become a requirement.

Glamorgan Gwent
Archaeological Trust
Limited
Ferryside Warehouse,
Bath Lane, Swansea,

SA1 1RD

cont/

As regards the Project Design supplied by the Cotswold Archaeological Trust, it is an adequate document, though admittedly such a Design can only be as good as the brief originally supplied. I have no doubt that the brief for this work, which was used in the tendering process, should have been approved by the Vale of Glamorgan Borough Council as the regulatory body, who alone can ensure the satisfactory discharging of the planning conditions which it imposed.

On the Project Design itself, I will confine my comments to the following main issues:

1. The Timetable

A site strip and excavation period of only 'up to three weeks' seems optimistic in my view, as stratified deposits and articulated buried human remains, which may appear, are extremely time-consuming to excavate and process.

2. Post-Excavation Analysis and Publication

It is my view that inadequate allowance of man-days and resources has been made for the reporting stage of the project. The comment that 'due to the limited area of investigation the results may warrant summary reporting' is unacceptable. The results of the archaeological work may warrant more detailed post-excavation analysis and publication. This alternative seems not to have been catered for in the Project Design and as a consequence the financial allocation may have to be increased.

3. Watching Brief

I am concerned that the low-intensity watching brief of 5 visits only may be insufficient and a degree of flexibility will be required in the event of important archaeological deposits being unexpectedly uncovered.

4. Contingency

As a consequence of the comments in 1, 2 and 3 above, I recommend that a contingency be considered to ensure the full excavation, recording and publication of the area identified for excavation.

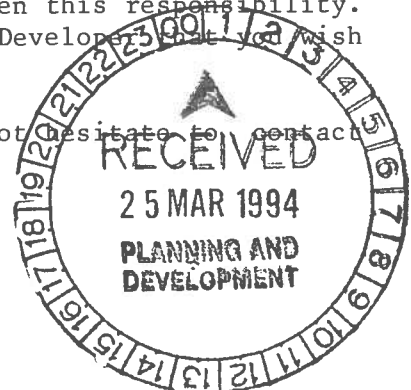

As the archaeological advisors to the Local Planning Authority we will wish to closely monitor the work on your behalf and report to you on the same. The requirement for you to nominate an archaeologist to carry out the Watching Brief condition (16) is no longer necessary as the Cotswold Archaeological Trust have undertaken this responsibility. I would be grateful if you could inform the Developer that you wish us to monitor the work on your behalf.

If I can be of any further assistance, please do not hesitate to contact me.

Yours faithfully,

Charles Hill

IDEAL HOMES WALES LIMITED
GREAT HOUSE FARM, LLANDOUGH, PENARTH

Your ref: TD/KH/92/00671/RES

Dear Sir

We refer to our letter to you of 4 February 1994, concerning the archaeological aspect of the above development, and to your reply of 15 February 1994.

Would you please note that our client has now appointed Countryside Planning & Management of Cirencester to organise and supervise the archaeological excavation and recording of part of the site. The work itself will be undertaken by the Cotswold Archaeological Trust Limited, who intend to commence work on site on 28 March 1994.

We enclose, for your information, a copy of the letter dated 9 March 1994 received from Cotswold Archaeological Trust Limited, together with a copy of their Project Design for this excavation. Although your approval of this is not required under the conditions of the planning permission, it is nevertheless sent to you as a matter of courtesy and for your information.

In your letter of 15 February 1994, you indicated that your Council have not yet nominated an archaeologist. Clearly this is a matter for your Council, but in that context you will note the intended date for commencement of work on site.

Yours faithfully

Paul Vining

SITE AT GREAT HOUSE FARM, LLANDOUGH, PENARTH

DETAILED PROJECT DESIGN

COTSWOLD ARCHAEOLOGICAL TRUST

FEBRUARY 1994

1. INTRODUCTION

1.1 This document sets out details of the project design by Cotswold Archaeological Trust for the targeted recording (excavation) at the site of Great House Farm, Llandough, Penarth.

1.2 It is based upon the brief supplied to CAT by Countryside Planning & Management, and the conclusions of the evaluation report by Glamorgan-Gwent Archaeological Trust.

2. STAFF

2.1 This project will be under the general supervision of G Walker, Senior Project Officer, Cotswold Archaeological Trust. Mr Walker has wide experience of performing, monitoring and managing field work projects of different periods in Britain.

2.2 The staffing structure will be organised thus: the Senior Project Officer will visit the excavation during the period of fieldworks. Principal responsibility however will rest with the Project Officer who will be on-site throughout the project. As the precise timing of the fieldworks has yet to be determined it is not possible to state at this time which officer will take charge of the project, although this information will be supplied prior to the commencement of fieldworks. All CAT officers are widely versed in archaeological practice, and have directed evaluation excavations on a variety of sites in both urban and rural environments.

2.3 The field team will consist of a minimum of 6 officers (1 Field Officer; 2 Site Assistants; 3 Excavators). The duration of the field works will depend upon what is found, but it is expected to fall between 8 and 10 days. Topsoil will be removed with a hymac using a toothless ditching bucket; machine hire is estimated at 4-5 days.

2.4 Specialists who will be invited to advise and report on specific aspects of the project as necessary are:

Dr Jane Timby: ceramics

Dr Timby has expertise in prehistoric, Roman and medieval pottery, and will liaise with C. Underwood-Keavill if necessary.

Mark Maltby (Bournemouth University): ecofacts

Elizabeth Pearson (Hereford & Worcester C.C): environmental plant remains

Rob Scaffe (archaeological consultant): pollen analysis

John Conway (Ciren. Agricultural Coll.): soil analysis

Oxford Laboratory: radiocarbon dating

3. TIMETABLE

3.1 CAT will commence the excavations on 28th March 1994.

3.2 The site strip and excavation have an estimated duration of up to 3 weeks.

3.3 A preliminary interim report will be available within 3 weeks from the completion of fieldwork.

3.4 A full publication-level report will be prepared within two years from the completion of fieldwork.

4. ACADEMIC OBJECTIVES

4.1 The academic objectives of the project are:

4.1.1 To elucidate the nature of any medieval or earlier deposits surviving within the excavation area.

4.1.2 To ascertain the nature of the human remains: in particular their date, and whether they are in situ or a dumped deposit. Their position outside the churchyard wall suggests they are likely to be either comparatively early in date, or else more recent (post-medieval) dumping.

5. METHODS

5.1 Open area excavation will be undertaken on the area marked on the plan. This has been designed to concentrate on areas within the footprints of the proposed residential units. It also aims to completely excavate those areas where human remains might be expected. Analysis of geotechnical information indicates that the stripping for road construction will not penetrate modern deposits, except in one area where a nineteenth century building has already destroyed any earlier deposits. A total area of approximately 0.1ha will therefore be examined.

5.2 A watching brief will be conducted during the laying of the sewer down the road line. A low intensity watching brief (maximum 5 visits) will be maintained over the rest of the development area.

5.3 A mechanical excavator equipped with toothless grading bucket will be used to remove modern overburden down onto the surface of archaeological deposits. Excavation will then continue by hand. Examination of buildings will concentrate on recovering the plan and structural sequence. Some degree of sampling may need to be instigated although a priority will be placed on obtaining details of the principal structural periods including the earliest. All discrete features (post holes, pits) will be sampled by hand excavation unless their common/repetitious nature suggests they are unlikely to yield significant new information. All linear

features (ditches) will as a minimum be hand sectioned. Priority will be attached to features which yield sealed assemblages which can be related to the structural sequence.

5.4 Due care will be taken to identify any deposits (of medieval or earlier date) which may have environmental potential. Bulk samples of up to 30 litres will be collected on site for subsequent flotation for carbonised remains. Mollusc samples to be collected if appropriate.

5.5 A priority will be attached to the identification of deposits which contain human remains, and the elucidation of their date and origin. Appropriate samples will be taken for possible radio-carbon dating, although this analysis will only be undertaken if it is likely to yield closer chronological precision than that obtainable from the ceramic evidence. All articulated burials will be fully recorded prior to removal.

5.6 All recording will follow the Cotswold Archaeological Trust field manual. Each context will be recorded on a pro-forma context sheet by verbal and measured description; principal deposits will be recorded by drawn plans and sections (normally at a scale of 1:20). Photographs (black and white print; colour slide) will be taken at intervals as the excavation progresses. All finds and samples will be bagged separately with unique numbers related to the context record.

5.7 Following completion of the excavation an ordered, indexed, and internally consistent site archive will be compiled in accordance with the specification presented in Appendix 3, MAP2. Once details of phasing have been worked out artefacts will be dispatched to the appropriate specialists. The results of all specialist studies will be integrated and assessed prior to the completion of the site narrative discussion and description. A short summary report will be prepared for immediate inclusion in *Archaeology in Wales* and *Cotswold Archaeological Trust Annual Review*. Following completion of the archive an assessment will be made of the importance of the discoveries, and a programme of research and analysis commensurate with the importance of the remains devised. This will itemise the sequence of tasks to be performed; their duration, and the critical project path. It is anticipated that due to the limited area of investigation the results may warrant summary reporting, with referencing back to the archive. It is likely that such a report (of possibly comparatively short length) will be submitted for publication in an appropriate journal.

5.8 An allowance of 49 man-days has been made for the completion of the site archive and production of a draft publication report, with a further 8 days for final editing and drafting. Specialist analyses of pottery, bone and environmental samples are additional to this. The academic quality of the report will be refereed by one or more CAT Directors (in this case probably Mick Aston and Trevor Rowley).

5.9 Notification of the start of site works will be made to the local planning authority so that there will be opportunities to visit the excavations and check on the quality and progress of the work.

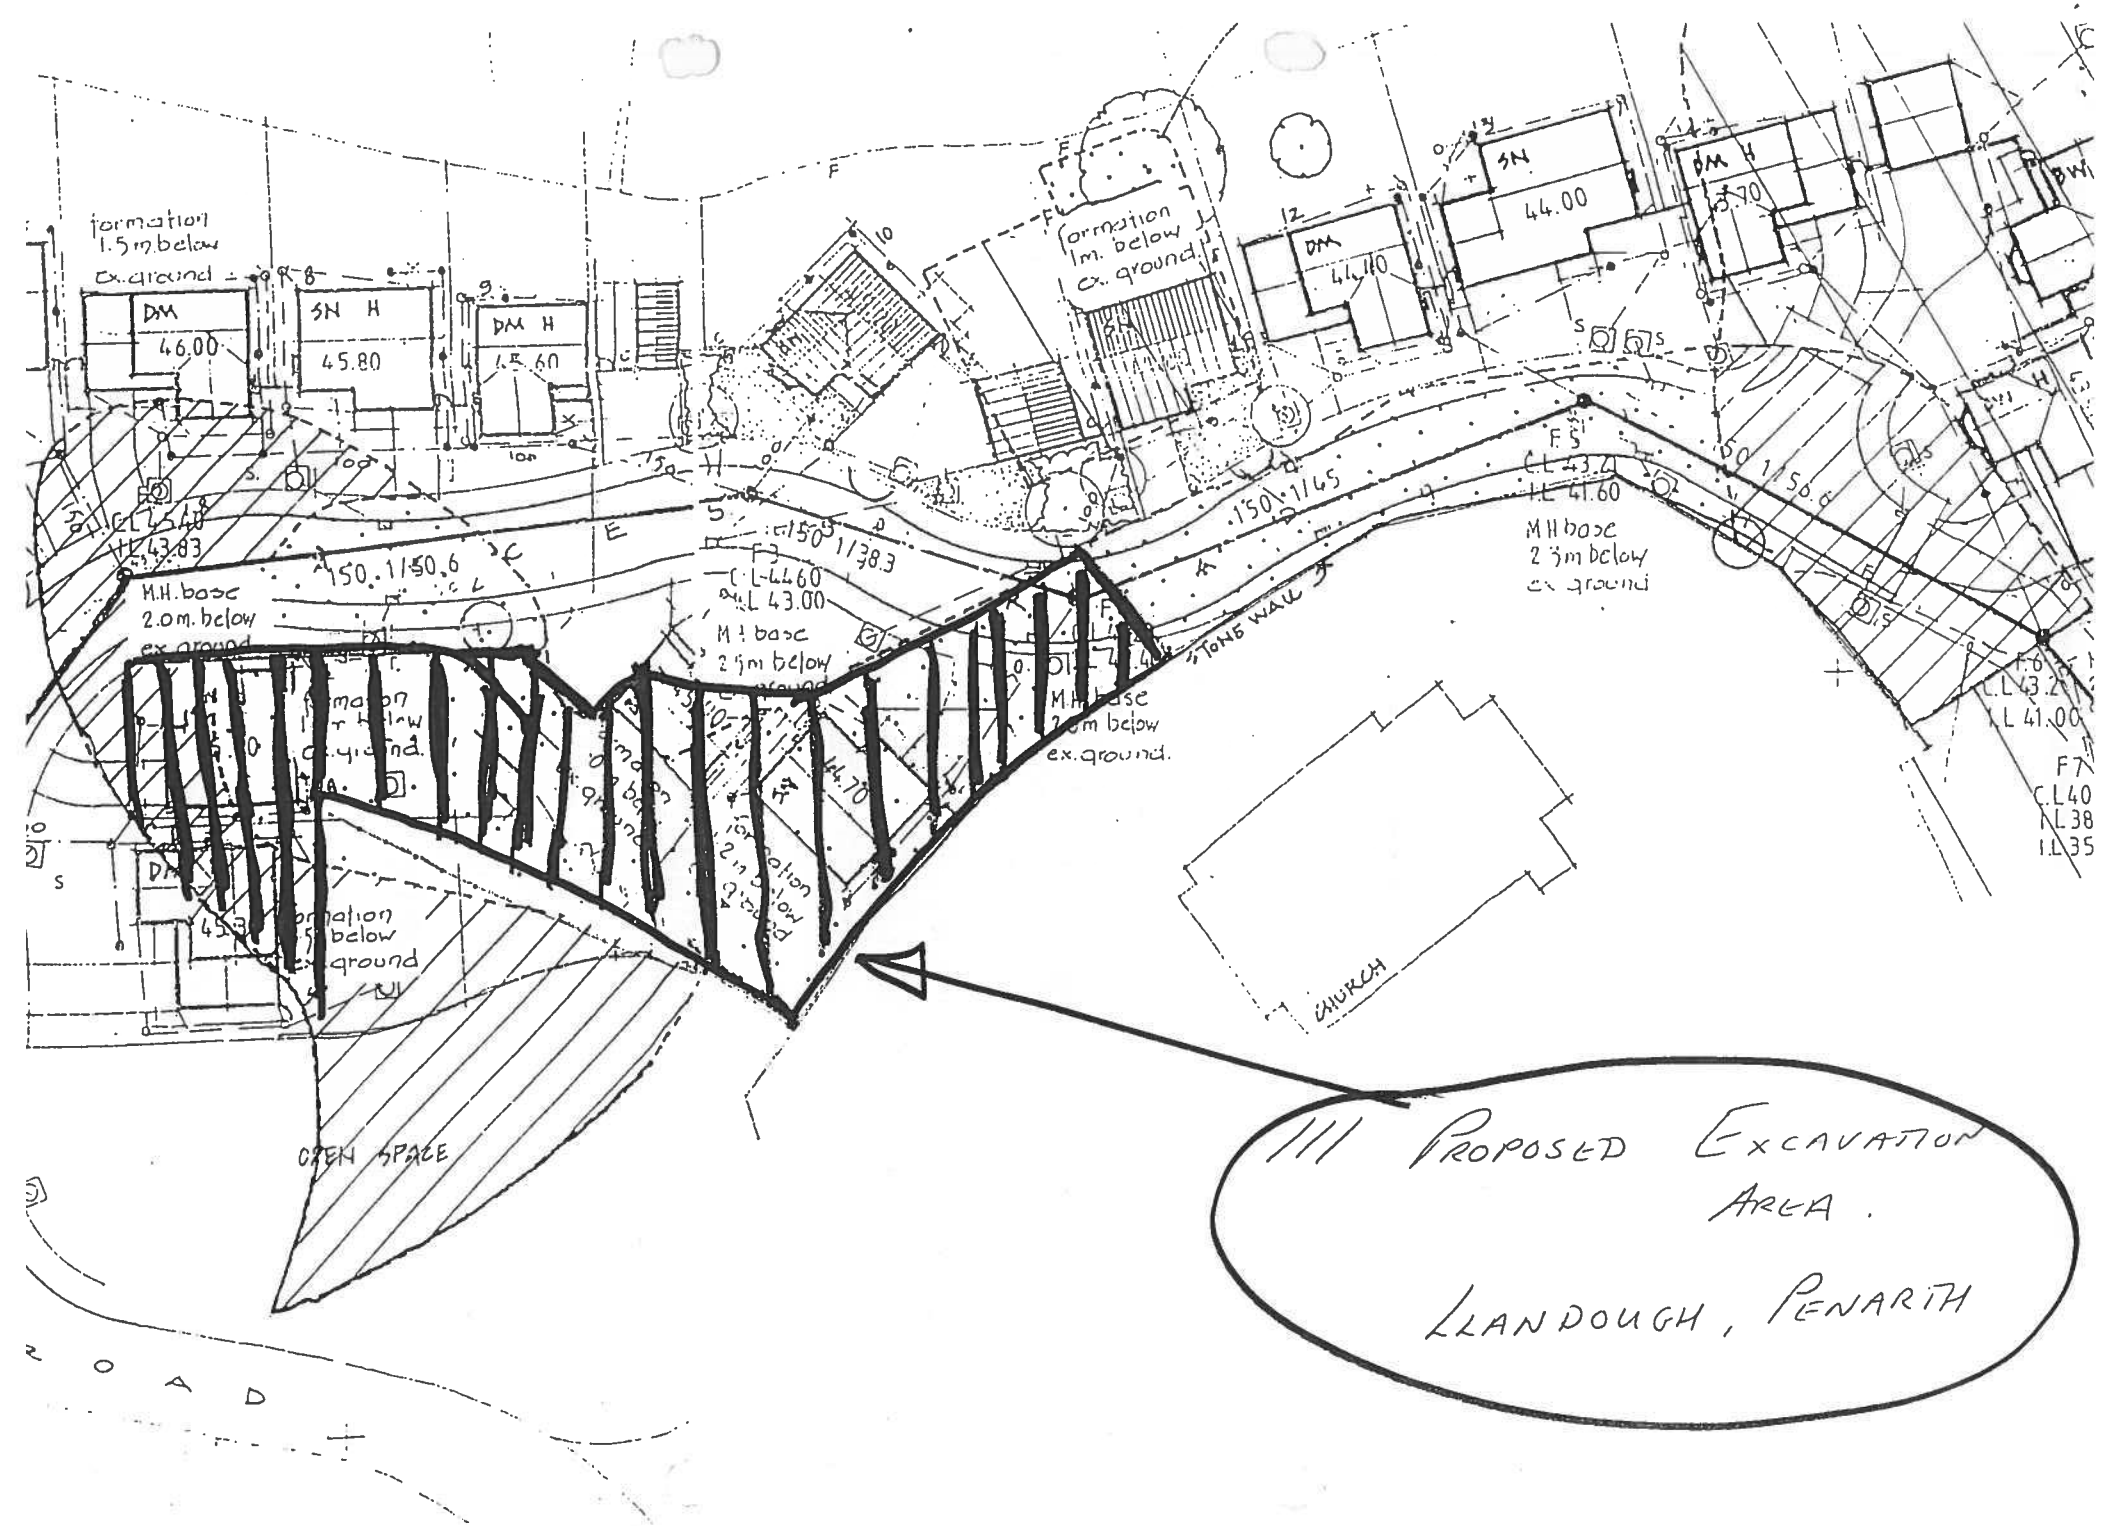

5.10 Subject to agreement with the legal landowner Cotswold Archaeological Trust will make arrangements with the appropriate Museum Service for the deposition of the site archive and artefact collection. Arrangements will be made for conservation of any items requiring this treatment.

6. INSURANCE DETAILS

6.1 Cotswold Archaeological Trust holds Professional Indemnity Insurance to a limit of £250,000.

6.2 Cotswold Archaeological Trust holds insurance for liability to its employees for a sum of £2 Million any one person.

6.3 Cotswold Archaeological Trust is insured for its legal liability to Third Parties for Personal Injury or Property Damage up to a limit of £2 Million on any one claim.

Dear Sir,

GREAT HOUSE FARM, LLANDOUGH

With reference to the above development, I would be grateful if you could write to me detailing the current state of affairs regarding this application, in particular the discharging of the planning conditions and the requirement for an archaeological mitigation strategy. I thank you in anticipation of receiving the same.

Yours faithfully,

Charles Hill

**IDEAL HOMES WALES LTD
DEVELOPMENT AT GREAT HOUSE FARM, LLANDOUGH**

Dear Sir

Thank you for sending us a copy of your letter dated 10 February 1994 addressed to the Clerk to the Llandough Community Council.

We hope that your further consulting the community council at this late stage will not delay the approval of the landscape scheme for this development. Our client is waiting to commence development and would appreciate it if a speedy determination of this scheme could be issued. In this respect we respectfully refer you to paragraph 41 of Welsh Office circular 1/85.

That part of the scheme which relates to the "village green" is broadly in accordance with the community council's own ideas. The notable exception is the extent of hard surfaced roadway shown on the council's drawing. That cannot be regarded as fairly and reasonably related to our client's development and our client is not prepared to pay for that additional work. If it is regarded as essential by the community council, it could be installed by them at a later date and our client's landscape scheme would not prejudice that being done.

As to maintenance of the "village green", we cannot see that this should be a reason for delaying determination of the scheme. Our client will obviously seek to have the open space on this development adopted in due course and is prepared to negotiate with the community council about that. Until a satisfactory arrangement is concluded, our client will maintain the open space in the usual way and that is, in any event, already allowed for in condition 9 as drafted.

Cont'd

We note that the application to discharge condition 9 relating to landscape was submitted to you on 6 January 1994 and we should be grateful if it could be determined within the usual eight week period. If you think this is unlikely, for any reason, would you please let us know as soon as possible.

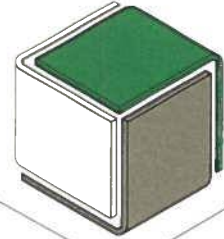

Yours faithfully

**IDEAL HOMES WALES LTD
PROPOSED DEVELOPMENT AT LLANDOUGH, PENARTH**

Dear Sir

We refer to the above proposed development and to the meeting held on site on 18 January which was attended by Mr. Tom Dunnon of your department, Mr. Charles Hill of the Glamorgan-Gwent Archaeological Trust, Mr. Ray John and Mr. Gareth Jenkins of Ideal Homes Wales and the writer.

The purpose of the meeting was to discuss the three conditions (conditions 16, 17 and 18) which your council imposed on the grant of outline planning permission no. 89/01396/OUT dated 13 March 1990. Our comments on these are as follows:

Condition 16

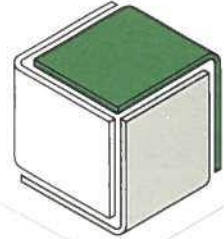

The developer is prepared to afford access to your authority's nominated archaeologist and, although the condition does not require it, the developer has notified you formally of the intention to commence development. It remains for your authority to decide whether to nominate an archaeologist for that purpose.

Condition 17

This condition requires that a field evaluation survey and archaeological assessment be undertaken. That has been done and you have already issued written confirmation that this condition has been complied with: see your letter to Messrs. Debenham Tewson dated 15 October 1990 under reference AP/GLP/89/01396/OUT.

Condition 18

This is the condition that requires the detailed plans to have regard to the results and findings of the report required under condition 17. Those plans were submitted to your authority as part of an application to approve the reserved matters and were approved by your council under application no. 92/00671/RES dated 3 September 1992. Your report to committee in connection with that application indicates that you took advice from The Glamorgan-Gwent Archaeological Trust, whose response was appended to your report

as appendix A. The notice of approval of reserved matters shows that no additional archaeological conditions were imposed at that stage.

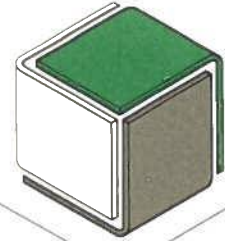

As you know, our clients have taken advice on this matter from Mr. Vernon Pugh QC. His advice is that condition 18 has been discharged and that the approval of the detailed plans and the notice issued by your council are decisive as to that.

We should be glad if you would now write and confirm that condition 18 has been discharged. In that event, our clients will be prepared to commission an appropriately qualified archaeologist to excavate those parts of the site which have been identified as having, or are likely to have medium to high archaeological potential, and to make an appropriate record of the excavation.

As you will appreciate, our clients are keen to commence development in full of this site and we should therefore be grateful if you would respond to this letter as a matter of some urgency.

Yours faithfully

PROPOSED DEVELOPMENT AT LLANDOUGH, PENARTH**

CONDITION 15 OF OUTLINE PLANNING PERMISSION 89/01346/OUT

Dear Sir

Thank you for your letter of 6 January.

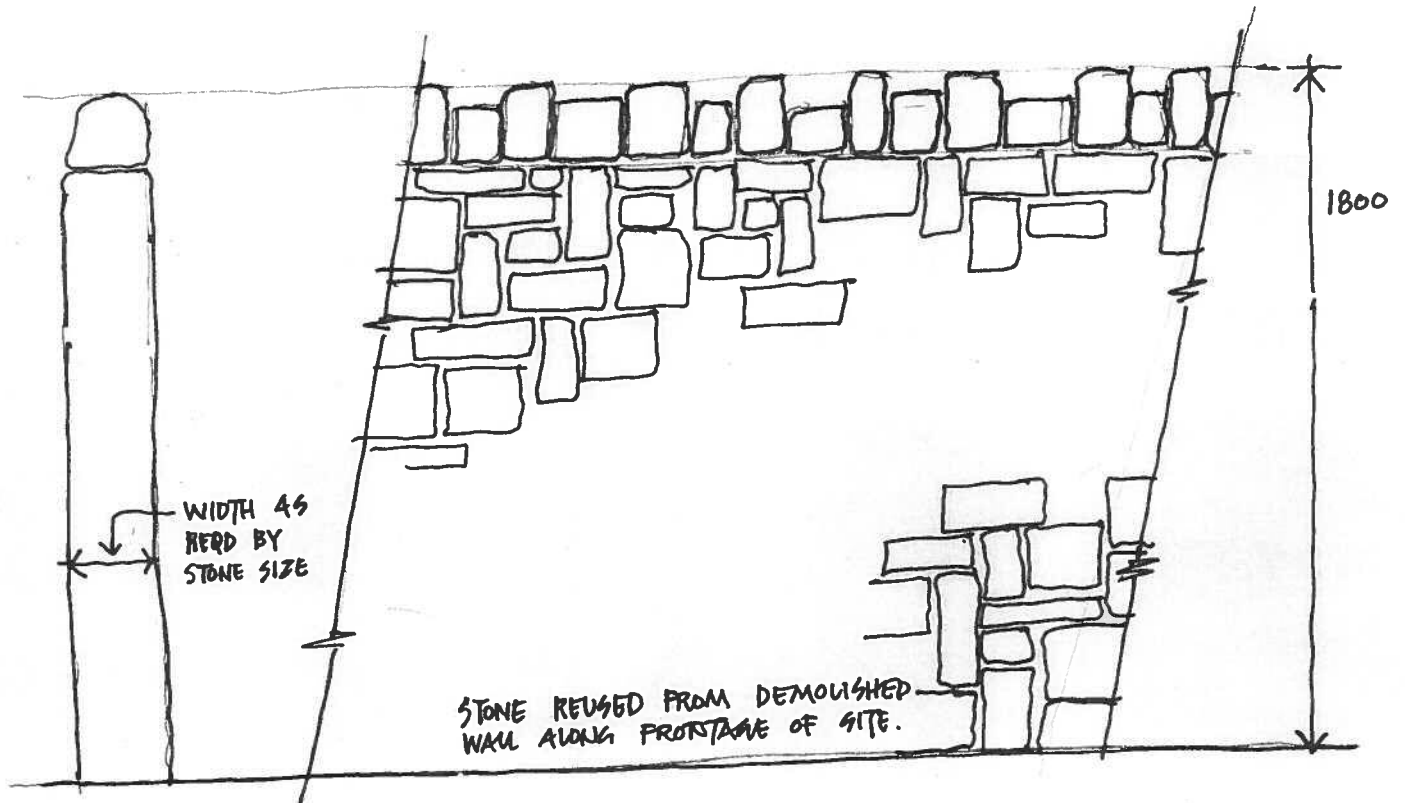

The stone wall to which you refer under the heading of condition 15 is not to be retained, as indicated on the site layout plan (drawing 3024/TP.100) submitted for reserved matters approval. Its retention is not practicable given the enlargement of the village green and the requirement for visibility splays at the access road junction. Instead, as indicated on the sit layout, the stone is to be reused on site to construct an 1800mm high wall along the boundary between the village green and the rear gardens of the houses to be built on plots 17, 18 and 20.

Please find enclosed four copies of our drawing no. 3024/STW01 which shows a detail of the proposed wall. Accordingly we should be grateful if you would now write and confirm that condition 15 is discharged.

Yours faithfully

Fax: (0792) 474469

Dear Sir,

Re: Great House Farm, Llandough, Penarth

With reference to the above site, I understand that work on site has finished.

The archaeological contractor is now required to produce a Post-Excavation Research Design as outlined in paragraph 5.7 of the Detailed Project Design (submitted to you by Wyn Thomas and Partners on 11th March 1994).

The relevant paragraph quotes Appendix 3 of the Management of Archaeological Projects (English Heritage, 1991).

Paragraph 5.7 states:

'Following completion of the archive an assessment will be made of the importance of the discoveries and a programme of research and analysis commensurate with the importance of the remains devised. This will itemise the sequence of tasks to be performed; their duration, and the critical project path.'

I would be grateful if you could enquire of the developer, as soon as possible, whether this assessment (or P.E.R.D.) is available, and, if not, when we might expect to receive a draft of the same.

I thank you in anticipation.

Yours faithfully,

Charles Hill.

CF1 9SD

Dear Rhodri,

Great House Farm, Llandough, Penarth

Thank you for your letter of 1st August, 1994 concerning the archaeological investigations being carried out at the above site.

Outline planning permission was granted for the residential development of the site in March, 1990 (ref 89/01396/OUT) and at that time the Glamorgan Gwent Archaeological Trust undertook a report on the archaeological potential of the site. This indicated that there was some potential for archaeological finds, and accordingly conditions were imposed on the outline consent requiring a field evaluation survey and archaeological assessment of the site to be carried out, and also allowing free access to the site to any archaeologist nominated by the Local Planning Authority.

The reserved matters application was approved (on behalf of Ideal Homes Wales) in September, 1992, (ref 92/00671/RES). The developers have brought their own archaeologists on to the site to carry out archaeological investigations and surveys as well as the keeping of records of the finds. The archaeologists used by the developers (and also agreed, and "nominated" by the Local Planning Authority) were the Cotswold Archaeological Trust. However, in the course of the archaeological excavations and recordings representatives of the Glamorgan Gwent Archaeological Trust have had full access to the site to inspect the archaeological work being undertaken. It is my understanding that the Glamorgan Gwent Archaeological Trust have had some reservations about the quality of the work being undertaken by the Cotswold Trust, and it is also possible that they may wish to draw the attention of the Institute of Field Archaeologists to certain matters, including the use of mechanical diggers during certain stages of the excavation works.

Continued ...

jm86

Rhodri Morgan M.P.
Fourth Floor,
Transport House.

11th August, 1994

It would therefore seem that the issue relates primarily to a difference of opinion between two sets of professionally qualified archaeologists regarding the quality of the archaeological investigations and recording work being carried out on the site. Accordingly, I am not in a position to comment further on the matter. However, should you wish to obtain more information about the archaeological background to the case, I would suggest that you contact the Cotswold Archaeological Trust and also the Glamorgan Gwent Archaeological Trust for their direct opinion on the matter and for their own individual accounts of what has taken place on the site. I attach for your information the contact addresses for both Trusts.

I hope the above comments are helpful to you, and if you require any additional background information on the planning aspects of the case, I will be delighted to assist you further.

Yours sincerely,

Peter J. Taylor

SITE AT GREAT HOUSE FARM, LLANDOUGH, PENARTH

ADDENDUM TO PROJECT STATEMENT

COTSWOLD ARCHAEOLOGICAL TRUST

JUNE 1994

COPY SENT TO G9AT ✓
ON 30/6. (70) 30/6

1. INTRODUCTION

1.1 This document forms an addendum to the Project Statement previously submitted to the Vale of Glamorgan Borough Council in May 1994.

1.2 Work has been progressing in accordance with the tasks and methodologies outlined in that document and are now nearing completion. A number of visitors to the site, including representatives of Cadw and the National Museum of Wales, have expressed interest in the results being obtained and satisfaction with the way the project is being conducted. Mr C. Hill of Glamorgan Gwent Archaeological Trust has also visited the site.

1.3 As a result of the on-going work it has become apparent that there are now three concentrations of burials:

A: in the area nearest to St. Dochdwy's church analysis of the disposition of the burials allows the existence of a former curvilinear boundary to the ecclesiastical centre postulated to lie beneath the existing church to be reconstructed. There are a number of intercutting burials in this area, including one on a north-south alignment which is cut by several aligned east-west.

B: to the south-west of this area a collection of graves on regular alignments and spacings has been found.

C: to the north of A a dense concentration of burials, including a marked preponderance of juveniles, has been located.

1.4 Concentration C lies outside the area to which the former Project Statement applied. Cotswold Archaeological Trust has now been contracted to excavate this new area, and the attached plan shows the revised areas of excavation. Outside of this area, a watching brief will be undertaken on areas where there is reason to believe further human remains *might* exist. A watching brief on road construction at the north-east end of the site already indicates that the limit of burials has been found in this direction, as they also have on the northern and southern sides. To the west it is also believed that the limit within the area which will be subjected to development has been found.

2. STAFF

2.1 The same staff as previously identified will work on the site. An allowance of 10 officers for 5 weeks has been made for the excavation of concentration C.

3. TIMETABLE

3.1 Cotswold Archaeological Trust is working towards completing fieldwork by the end of July/first week of August 1994.

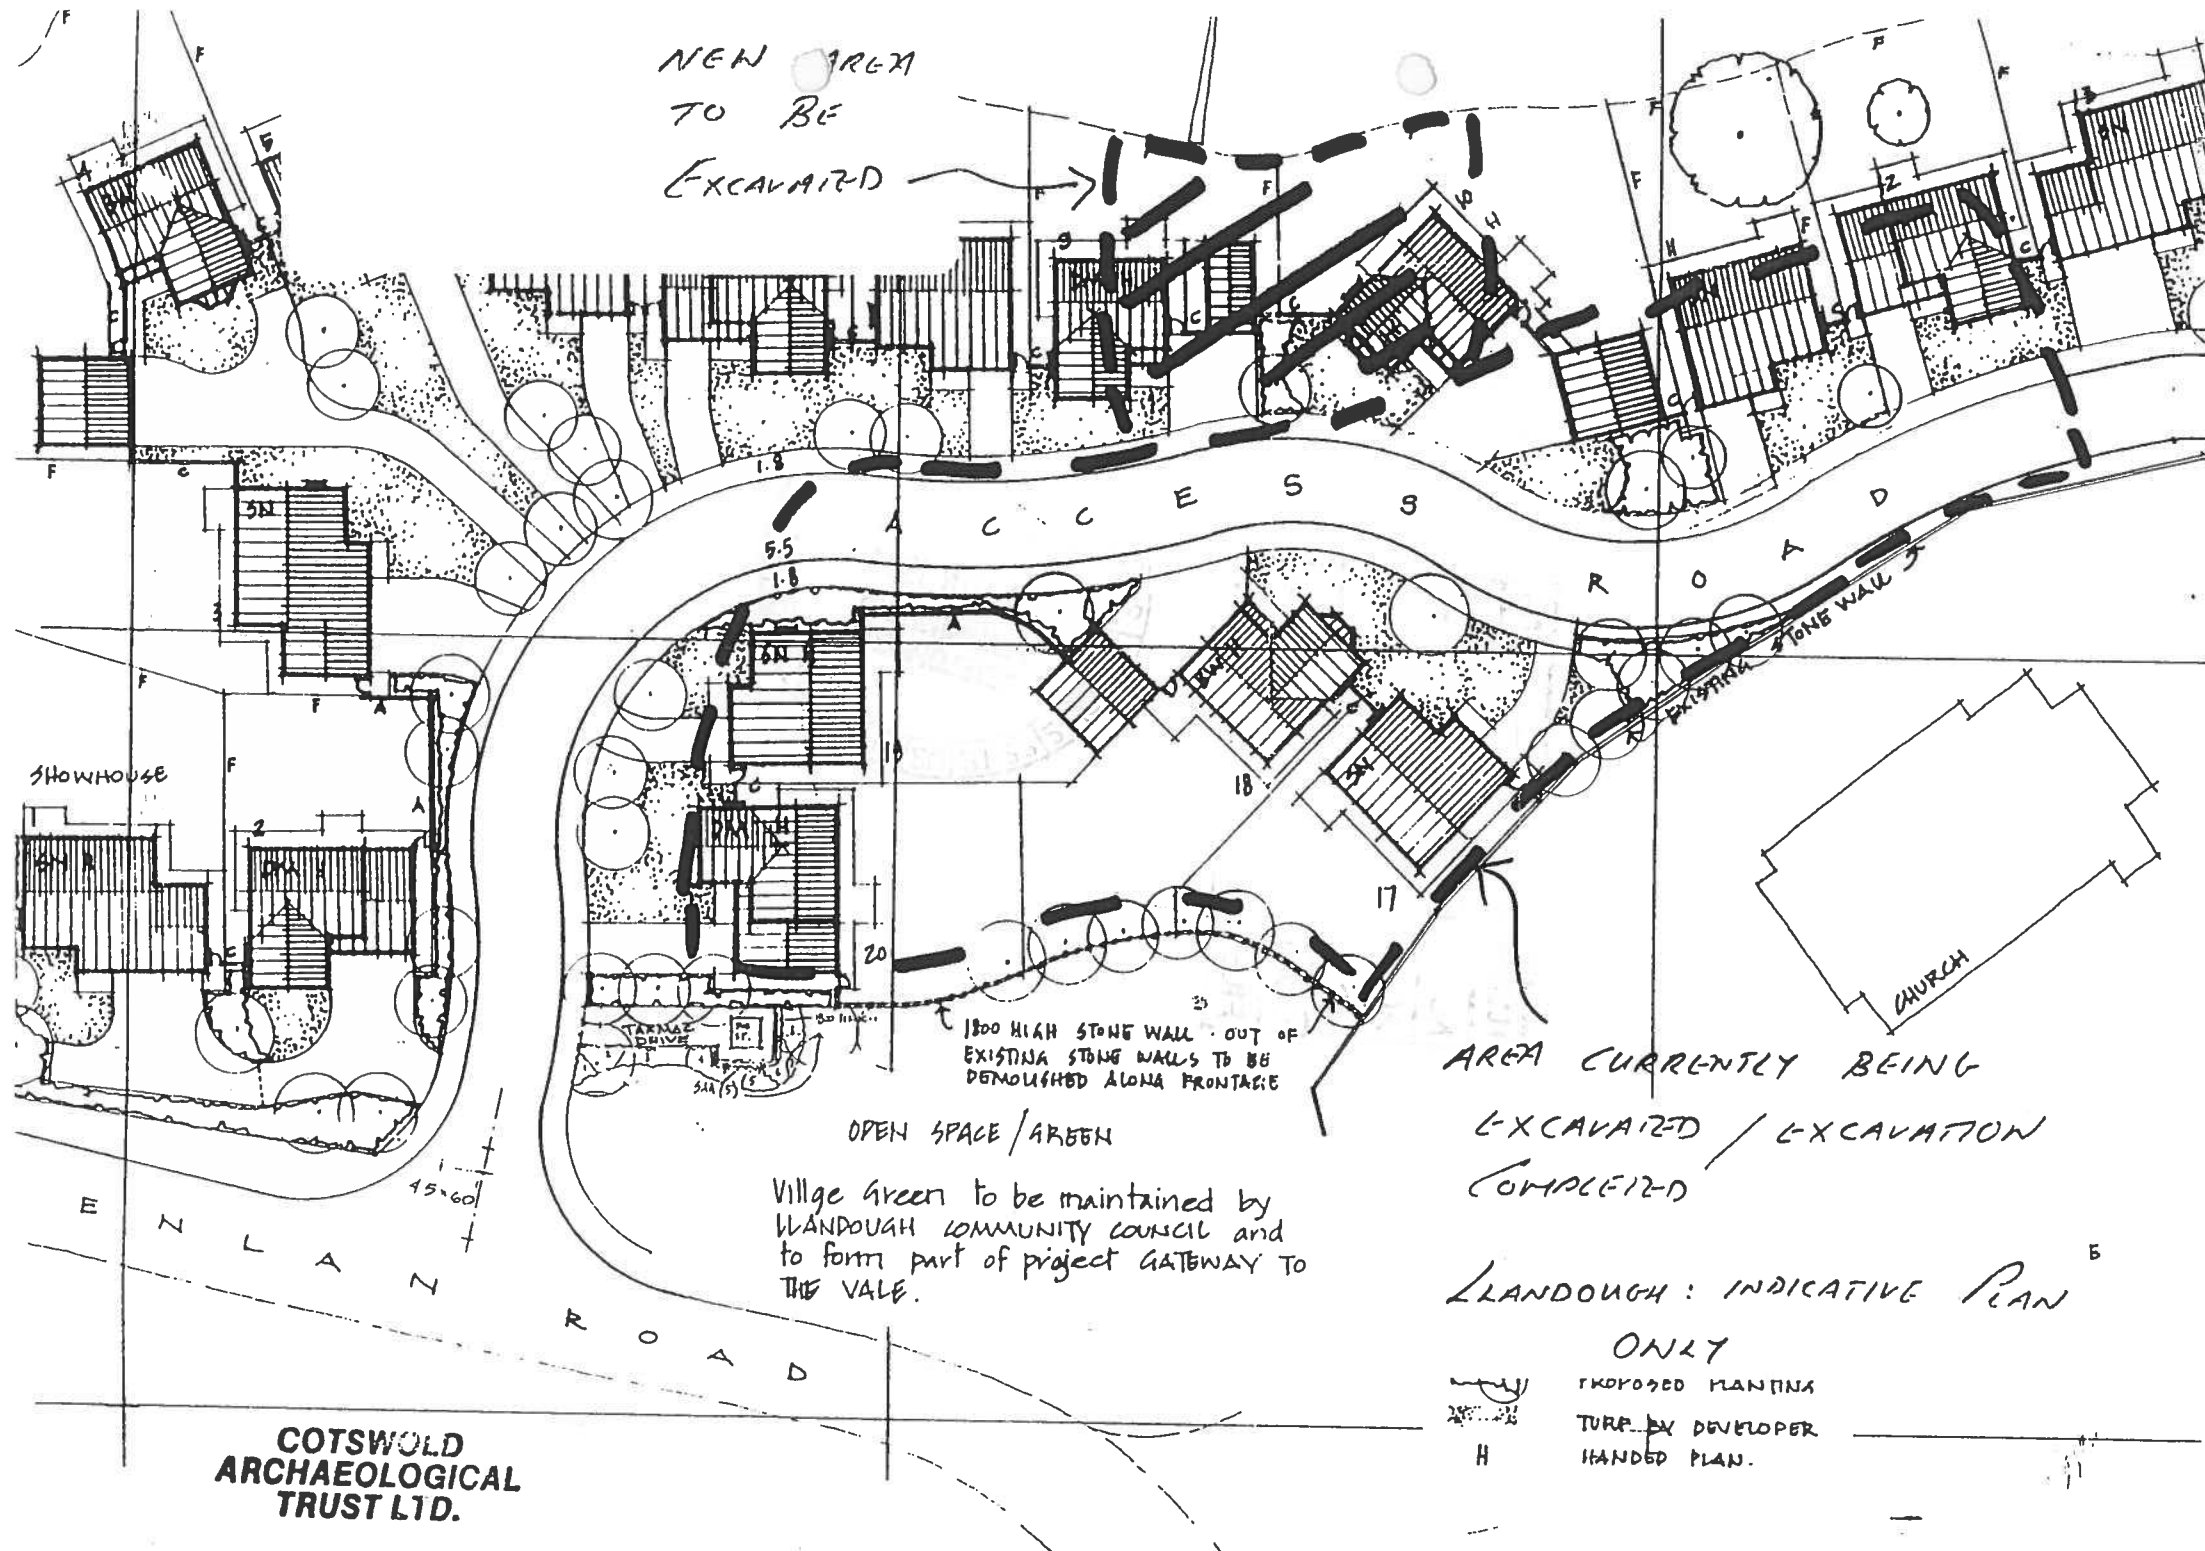

4. ACADEMIC OBJECTIVES

4.1 As previous Project Statement.

5. METHODS

5.1 As previous Project Statement. The Project will entail the analysis, description and publication of the results of the fieldwork.

Dear Sirs,

**Re: Church View Close, Llandough
(Formerly Great House Farm, Llandough)**

As you are aware we have inspected the area of land adjacent to Llandough Hill with members of your Technical Department and the County Council are also aware of the problem caused by the ground in its present condition.

At the moment, at the bottom of the existing batter on the lower part of the site and at the edge of Llandough Hill, there is an area of land approximately 3-4 metres in parts below the edge of Llandough Hill. It is an area that is currently being used for fly tipping which includes tyres and we have cleared the area several times. We consider that it would be advantageous and an improvement to the area if we were allowed to fill and grade into the existing site batters which would enable us to successfully integrate this area into the garden of Plot 16. This would also remove the potential danger of the 'drop off' that exists at present on the edge of the roadway.

We have hatched and edged red the area of land that would be affected by the fill operation on the enclosed plan and we have also clarified this on sections 1, 2 and 3 of the drawing.

IDEAL HOMES WALES LIMITED

Llantrisant Business Park, Llantrisant, Mid Glamorgan CF7 8YP

Telephone Llantrisant (0443) 223653

Facsimile Llantrisant (0443) 237328

Registered Office: Goldsworth House, The Goldsworth Park Centre, Woking, Surrey GU21 3LF

START 48155 | 5 JUL 94 | Llantrisant 48164 | 48166 | 48171

We will endeavour to ensure that any mature trees are protected and we feel that it would be advantageous once the fill has been completed if we could discuss the planting of the area with suitable species.

On balance, we consider that our request will clearly improve the area and we would be obliged if you could treat this as an amendment to the original planning consent in order that we may proceed with the fill during the current site operations.

Yours faithfully,
for Ideal Homes Wales Limited,

G. S. Jenkins, C.Eng.

The Cotswold Archaeological Trust can be reminded that as Members of the Institute of Field Archaeologists they are required to ensure that they have secured the necessary resources to fund the reporting and dissemination of the archaeological work prior to the commencement of that work. Under the Code of Approved Practice for the regulation of Contractual Arrangements in Field Archaeology:

An archaeologist has a responsibility to ensure that in cases of funding from several sources, the combined funds will enable him or her to discharge his or her full obligations against an agreed scope of works.

The Cotswold Archaeological Trust are now required as a matter of urgency to demonstrate that they are fully and properly resourced to undertake their total obligations for this site and especially for the post-excavation stages of a very important archaeological site of national significance.

I would be grateful, therefore, if you could present these concerns to the Developer and the Cotswold Archaeological Trust who should be able to answer the basic question - who is funding the post-excavation work programme to enable a comprehensive report and appropriate site archive to be accomplished?

I feel obliged to ask you to seek clarification on this matter at this stage in order to ensure that neither this Trust nor the Vale of Glamorgan Borough Council will be held responsible for funding any aspect of the post-excavation work following the completion of the fieldwork.

If you require any further information, please do not hesitate to contact me.

Yours faithfully,

Charles Hill

Dear Sir,

GREAT HOUSE FARM, LLANDOUGH

I thank you for your letter of 10 May 1994 and the copy of the correspondence from Wyn Thomas and Partners. I make the following observations on their letter of 5 May 1994:

1. Condition 16 of outline planning permission No 89/01396/OUT, which refers to a watching brief, can now effectively be discharged by your Authority as the developer has guaranteed to undertake 'preservation by record', ie, full excavation, recording and publication of all the archaeological deposits on site prior to development. Our curatorial role on site is to monitor the progress and standards of the excavation and subsequent post-excavation work on your behalf in order to ensure that this site is properly investigated and fully and professionally published without undue delay. As I emphasised at the meeting on 4 May 1994, should there be a requirement for a watching brief, this responsibility was effectively undertaken by the Cotswold Archaeological Trust in the specifications they submitted to the Local Planning Authority (see paragraph 5.2).
2. This is accepted.
3. Our considered opinion was that work should stop on site until such time as an acceptable Detailed Project Design was submitted by the Cotswold Archaeological Trust; this could be compiled in less than one working day. We did not at any time envisage lengthy delays.

4. The matter of whether the site should be scheduled is obviously one for Cadw: Welsh Historic Monuments to consider. However, should the forthcoming Project Statement from the developer, designed to 'protect the site by record' (including the commitment to publish in full the results of the fieldwork) be unsatisfactory, I have no doubt that Cadw themselves will wish to consider their own position with regard to spot scheduling this rare and important site of national significance under the criteria laid down in the 1979 legislation.
5. Our recommendations have consistently been for the developer to adopt a mitigation strategy (ie, 'preservation in situ' which could have enabled the development without the need for high archaeological costs); nevertheless, is has been the developer's wish to proceed with 'preservation by record', which in this case we accept as the second best option.
6. We remain very concerned about the quality of the work being carried out by the Cotswold Archaeological Trust. This, and related matters, may in due course be referred to the Institute of Field Archaeologists. We trust that the work will be fully resourced by the developer, including the probable high cost of the post-excavation and publication requirements which will undoubtedly follow the fieldwork stages.
7. Whilst the work is being carried out on a so-called 'voluntary basis', because the site is a 'Dark Age' cemetery, no development can take place until the site has been archaeologically cleared to the highest professional standards. I have no doubt that the developer is fully aware of this point, though it would perhaps have been churlish for us to have pointed this out at the meeting. We are grateful for the developer's initiatives, though we wish to ensure that the site will be fully and professionally excavated and with the full resourcing of the ongoing post-excavation stages, which will occur as the permitted development itself lawfully proceeds.
8. We discussed the question of the Licence under Section 25 of the Burial Act 1857 with Mr Mario Sozzi of the Home Office on 29 April 1994 and 3 May 1994 at 4.12.pm. He informed us that a Licence had been granted to Mr A Thomas of the Cotswold Archaeological Trust on 21 March 1994, that it expired on 21 April 1994, and that it had not been renewed as of late afternoon on 3 May 1994.
9. We are grateful to the developer for the submission of a Project Statement, or what we would describe as a detailed project design. This is a key document which a professional archaeological body in this country would normally provide for the comments and approval of the Regional Archaeological Curator. An archaeological contractor should never be in the position of writing his own Brief as well as carrying out the work. This Curator/Contractor split is a fundamental requirement of modern British archaeology and is mainly in the interests of the developer himself.

cont/

10. We agree that in the interests of the site the involvement of the media should be restricted; we are grateful that security is being employed. Nevertheless, the site is visible from the church wall, and we would recommend that a hoarding should be placed around the excavation where it is in sight of the public. This may be a matter of concern to you as the Local Planning Authority acting in the interests of the community as a burial authority.

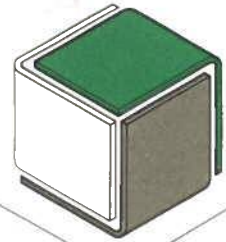

I apologise for the length of this correspondence. I have not copied this letter to Ideal Homes, etc, but leave it to your discretion to make further appropriate comments/recommendations to the other parties involved.

We are extremely grateful for your kind consideration of this matter.

Yours faithfully,

Charles Hill

Our ref:

**IDEAL HOMES WALES
GREAT HOUSE FARM, LLANDOUGH, PENARTH**

Your ref:

Dear Mr Evans

I refer to our meeting yesterday (4 May) which was also attended by Mr Tom Dunnon of your department, Messrs G. Dowdell and C. Hill of the Glamorgan Gwent Archaeological Trust, Messrs John Davies and Ray John of Ideal Homes Wales and Mr Neil Holbrook of the Cotswold Archaeological Trust.

I believe that the main conclusions of the meeting were as follows:

1. Your council has appointed Mr Charles Hill of GGAT as the archaeologist nominated by the LPA pursuant to condition 16 of outline planning permission no. 89/01396/OUT. Mr Hill will be afforded ready access to the site by IHW and CAT *"to observe the excavations and record items of interest and finds"*, and such a facility has been granted by our client already, prior to Mr Hill's formal nomination by your council.
2. Conditions 17 and 18 of the outline planning permission have been discharged, as confirmed in your letters of 15 October 1990 (AP/GLP 89/01396/OUT) and 15 February 1994 (TD/KH/92/00671/RES).
3. Contrary to the content of GGAT's letters of 28 April 1994 (S387/CH/CS) and 3 May 1994 (S387/GD/ECH), ostensibly written on your council's behalf, it is not your council's intention that our client should stop work on site. Your confirmation of that was much appreciated by my client who was concerned at the further delay and expense which would have inevitably resulted from such action.
4. It is not your intention to recommend to your council that the extant planning permission should be revoked or modified or that the Secretary of State for Wales should be asked to schedule the site under the *Ancient Monuments and Archaeological Areas Act 1979*.

5. Your council's objective for this site - and that of GGAT - is one of 'preservation by record'.
6. IHW has volunteered to carry out preservation by record and has appointed CAT as its specialist archaeologist contractor for that purpose. CAT is well qualified to carry out the work (and is a Member of the Institute of Field Archaeologists) and IHW has fully resourced the project, at considerable cost.
7. The work is being carried out on a voluntary basis having regard not only to the field evaluation survey and archaeological assessment report prepared by GGAT in August 1990, but also to the more extensive features identified recently on site by CAT as part of its initial excavation. The appropriate framework for such work in this circumstance is paragraph 31 of *PPG16(Wales) Archaeology and Planning*.
8. CAT has obtained (and renewed) a licence from the Home Secretary authorising the disinterment of human remains found on the site. The work is being carried out 'with due reverence', as required by the licence. The licence does not expire until 20 July 1994, by which time the on-site excavation work will have been completed.
9. In a spirit of cooperation, IHW will arrange for a statement of the work being undertaken by CAT to be sent to you. This document will be provided for information purposes only and will not be subject to approval either by the council or GGAT. I hope to let you have the document as soon as it has been formulated by IHW's advisors and approved by IHW. The statement will take account of the draft *Brief* prepared by GGAT and faxed to me on 3 May 1994, but will omit reference to any requirement for the work to be approved or controlled by either your council or GGAT. Confirmation was given that, in other respects, work on site is proceeding generally in accordance with the content of the draft *Brief* and with accepted archaeological practice for such excavations.
10. All present at the meeting agreed that interest in the site by the press and other media would not be conducive to preservation by record, as evidenced by events over the last weekend following the article in the *South Wales Echo* on 29 April 1994. Any press releases to be issued by the interested parties will be agreed between IHW and the council. In view of the recent disturbances, my client will now be employing security at the site.

I trust that this letter accurately records the main conclusions of the meeting but you will no doubt let me know if you disagree.

Thank you for agreeing to attend the meeting, at my client's request, at such short notice.

Yours sincerely

Paul Vining
WYN THOMAS + PARTNERS
